

Pet Bowl Mat

Protect floors from mealtime messes, spills and splashes with the “stays in place” mat designed especially for your fur baby.

limited-edition

Item #:  Cat-317002 graphite, Dog-317005 mushroom

Cat: 50 cm x 35 cm

Dog Bone: 52 cm x 36 cm

The problem

You love your furry friend, but they sure can make a mess at dinnertime! The spills and dribbles from the food and water bowls seem to never end. You've tried using a cloth or napkin under her bowls but they're not very absorbent, plus they often slide around in their eagerness to eat, which causes even more of a mess.

Norwex solution

Give Fido and Fluffy their own perfect placemat. The Norwex Pet Bowl Mat is super-absorbent and has silicone paw prints on the underside to keep the mat in place during mealtimes. Less slipping and sliding means food and water stay in the bowls, so less cleanup for you. And BacLock® in the mat helps keep it fresher longer so you don't have to wash it as often.

Why it's better

- Silicone paw prints help it stay in place while your family pet eats and drinks
- Earth-friendly – each Pet Bowl Mat is constructed using 2.6 recycled plastic bottles (500 ml)
- BacLock®, our exclusive micro silver agent, protects the cloth by inhibiting odour in the cloth, which means it's ready to use again and again
- Suitable for indoor as well as outdoor use
- Sized perfectly for your pet's food and drink bowls

What your customers will love

- Floors stay clean and dry
- Water spilled by messy drinkers is absorbed
- Available in cute designs for both dogs and cats
- Label functions as a handy loop for hanging to dry

How to use

- Place mat on the floor with silicone paws side down
- Place your pet's food and water bowls on the mat

Caring for microfibre

Wash dirty microfibre with a Norwex laundry detergent and avoid bleach, fabric softeners and dryer sheets.

Did you know

- The number of meals a dog eats per day depends completely on the family schedule. Dogs should eat at least two meals each day, about 12 hours apart. But a breakfast, lunch, and dinner schedule is an equally great option. If more than 12 hours elapses between meals, the stomach can become hyperacidic causing nausea.
